TILT LEG NXT UMOUNT™ **COMPATIBILITY**

COMPATIBILITY

WHY TILT | FGS?

In the pursuit of harnessing solar energy efficiently, the choice of mounting systems plays a pivotal role. Unirac's tilt legs stand out as a versatile and effective solution. Unlike conventional fixed-angle mounts, adjustable tilt legs offer a range of benefits that enhance both the performance and adaptability of solarmodule arrays. With only 2 legs you can cover a spectrum of tilt angles (fully adjustable from a 10° - 30° tilt scheme). Easily optimize the tilt angle for your region, power output, and solar impact. UL 2703 tested and certified for nationwide compatibility and installation. Updated U-Builder design tool for superior customization layout schema. No Ballast Necessary!
